Nearly a Plug & Play Kit - Plug in the GU Patrol speed sensor, connect power & earth.

## Description

---

### Electronic Speedometer Correction Unit - GU / Y61 Nissan Patrol

This unit is almost plug & play - Plug the genuine Nissan connectors into the speed sensor and connect ignition power and earth to the unit.

Kit Contains:

- Multi program electronic speedometer correction unit
- Nissan Patrol GU / Y61 wiring loom
- Connectors
- Instructions

The new Marks 4WD Speedometer Correction Unit is the first of its kind for a few reasons:

- Enter your factory tyre size and then your new tyre size - the unit will calculate the required change
- Enter tyre details in metric (265/75 r16) or imperial (33x12.5 r15)
- Adjust by a percentage change only
- Adjustable in 0.5% steps so you can get your speedometer set accurately
- LCD display
- You can adjust and save the programs in real time while driving the vehicle

We recommend using a GPS to check your speedometer once your speedometer correction unit has been set.

1. If your vehicle is a 2012 model or newer please check if it has a speed sensor located on the transfer case - if it does have the sensor this unit will work in your vehicle

Our digital speedo corrector units are 100% designed, engineered and manufactured in Australia. The team who designed the unit also sell the unit. Local Australian phone/email support if you need assistance for installation or programming.

**Note:** If your speedometer is not perfectly accurate though the entire range, our unit cannot fix this.
