Short Description

Toyota LandCruiser Diff Lock Air Actuator Conversion Kit Suits:

- VDJ76
- VDJ78
- VDJ79

Description

Marks 4wd Diff Lock Air Actuator Conversion Kit allows you to replace your factory electric diff lock motors with a simple air activated system.

You can wire the system to use standard Carling (ARB) switches or wire them to the factory Toyota rotary switch - all your factory dash lights will work as normal.

This kit is designed to suit the VDJ76, VDJ78 & VDJ79 series vehicle but may fit other models.

The kit includes:

- Front air diff lock actuator
- Rear air diff lock actuator
- Blanking plate
- Stone guard bracket
- Air solenoid
- 5mm Nylon air line
- Spanner
- Assorted fittings

The factory motors are prone to water ingress which will cause rust/corrosion and either stop you engaging or disengaging the diff lock.

As the diff locks are engaged with air you are required to have an onboard air supply, we use and recommend the [ARB range of compressors](#)

Note: You will have to wire the solenoid, external switch or Toyota switch, compressor, etc. we don't supply wiring for this as each vehicle will have different requirements. The instructions include the wiring diagram for the solenoid.
