SNORKEL TECHNOLOGY

A high-quality advanced air intake system ensures that the air entering your engine is free from airborne particulates, allowing its internal components to operate smoothly and efficiently. This not only enhances engine performance and fuel savings but also prolongs its lifespan & reduces maintenance costs.

SCAVENGER snorkels incorporate cyclonic pre-separation into the snorkel body itself removing air particles prior to entering your vehicle's airbox.

Understanding engine intake airflow is crucial to snorkel development. SCAVENGER Snorkels undergo rigorous testing to ensure your vehicle has the ultimate protection. The snorkel's cyclonic separators spin and remove heavier-than-air particles, directing them through a vacuum hose to the rear of the radiator fan. Powered by the fan's vacuum force, the cyclonic pre-separators remove dust from the air, which is then expelled beneath the vehicle.

Just as clean air is vital for our lungs to function optimally, your vehicle's engine needs clean air to perform at its best, enhancing both performance and lifespan. The SCAVENGER Snorkel acts like a nose, drawing in cleaner air from above and filtering out large dust particles. The Freudenberg filter then purifies the air, ensuring that only the cleanest air reaches the engine for efficient and long-lasting performance.

The SCAVENGER Snorkel system features the highest efficiency filter on the market, designed to capture submicron particles that standard filters miss, thereby enhancing engine longevity. Freudenberg's filters are known for their superior quality, offering excellent flow, filtration efficiency, and durability. Using advanced multi-layered media technology, these filters effectively capture a wide range of particles, from coarse dust to fine pollutants. The high performance synthetic fibers with electrostatic charged media optimise airflow while maximising particle retention.

SCAVENGER Snorkels to suit

Toyota HiLux 2015 - 2025 GUN (GDJ)

- + Workmate
- + SR
- + SR5
- + GR & GRS
- + Rogue
- + Rugged
- + 48V Hybrid

SCAVENGER Snorkels include

- + Sleek and Modern Design
- + High-Performance Functionality
- + Extensively Tested for Extreme Conditions
- + High-Efficiency Air Filter Integration
- + Australian Designed and Manufactured
- + Built for dusty Off-Road Environments
- + Lifetime Warranty

About SCAVENGER

SCAVENGER Snorkels is a WA based manufacturing business specialising in advanced air intake technologies.

As a Work Air Technologies brand, SCAVENGER Snorkels offers a bespoke range of advanced air intake systems to suit a number of vehicles.

SCAVENGER Snorkels patented design offers superior engine protection and aesthetic appeal. Never has there been a more stylish snorkel.

SCAVENGER Snorkels has been years in the making as part of Work Air Technologies - a global leader in advanced air treatment systems.

Proudly Australian designed, manufactured and owned, SCAVENGER Snorkels are available through a network of approved installers.

PROUDLY AVAILABLE AT
